-!- FUNCTION: Produces in vitro relaxation of rat arterial smooth muscle and constriction of intestinal smooth muscle.
                                                                                                                                                                                                                                  aggregation.

Subbarr. Hexamer containing 2 sets of 3 nonidentical chains (alpha, beta and gamma), linked to each other by disulfide bonds. PTM. Conversion of fibrinogen to fibrin is triggered by thrombin, which cleaves fibrinopepitides A and B from alpha and beta chains, and thus exposes the N-terminal polymerization sites responsible for the formation of the soft clot.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   [Thr6]bradykinin.

                                           "Isolation and structure of two gastrin/CCK-like neuropeptides from the American cockroach homologous to the leucosulfakinins.";
Neuropeptides 14:145-149(1989).
--- FUNCTION: Changes the frequency and amplitude of contractions of the cockroach hingut. Stimulates muscle contraction of hindut.
--- SIMILARITY: Belongs to the gastrin/cholecystokinin family.
                                                                                                                                                                                                                                       Gaps

Sequence 9, Application US/09580018

Patent No. 676188

GENERAL INFORMATION:

APPLICANT: Schenk, Dale B.

APPLICANT: Schenk, Ted

TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease

TITLE REFERENCE: 15270J-004760US

CURRENT APPLICATION NUMBER: US/09/580,018

CURRENT FILING DATE: 2000-05-26

PRIOR FILING DATE: 1999-05-28

NUMBER OF SEQ ID NOS: 77

The present sequence represents a peptide epitope derived from beta-amyloid precursor protein peptide. The specification describes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition comprising a recombinant DNA molecule containing a gene encoding a recombinant antibody end-specific for the N-terminus or the C-terminus of an amyloid-beta peptide, operably linked to a promoter which is expressed in the central nervous system. The recombinant antibody molecules prevent the accumulation of beta-amyloid peptides in the extracellular space, interstitial fluid and cerebrospinal fluid and the aggregation of such peptides into amyloid deposits in the brain. They also inhibit the progression of Alzheimer's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises a method for treating a neurological disease or a central nervous system (CNS) disorder. The method involves displaying a therapeutic molecule capable of treating the neurological disease or CNS disorder on a viral display vehicle. The viral display vehicle is then introduced into the olfactory system of a subject to treat the disease or and disporter. The method of the invention is useful for preventing, treating and diagnosing neurological diseases or CNS disorders, such as: Alzheimer's disease; Creutzfeld-Jakob disease; Huntington's chorea; viral infections of the brain, brain tumours, lyssomal storage diseases; parkinson's disease, and multiple sclerosis. The present amino acid sequence represents a peptide which was used in the invention
disease by inhibiting the interaction of beta-amyloid peptides mediating Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced complement activation and cytokine release involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treating or diagnosing neurological diseases of the central nervous system, e.g. Alzheimer's disease, comprises displaying a polypeptide or diagnostic agent on viral display vehicle and introducing or detecting the display vehicle.

Beta-amyloid (Abeta) peptide 3-6 SEQ ID NO:2.

(first entry)

29-JAN-2004

ADE36574;

ADE36574 standard; peptide; 4 AA.

RESULT 5 ADE36574

```
The present invention describes an antibody that is targeted to amyloid beta peptide, or its fragment. Also described: (1) an antibody that is tree-end specific and is targeted to: (a) the free N-terminus of amyloid beta-peptide; (b) the free N-terminus of amyloid beta-peptide; where the first amino acid of amyloid beta-peptide is aspartate; (c) the free N-terminus of N- and/or C-terminus-truncated amyloid beta-peptide fragment; (d) the free C-terminus of the amyloid beta-peptide Abetal-39, Abetal-40, Abetal-41 or Abetal-43; or (e) to the free C-terminus of N- and/or C-terminus of the amyloid beta-peptide fragment; (2) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide has nootropic and artificial composition comprising the antibody therapy. The antibody targeted to amyloid beta peptide has nootropic and antibody targeted to amyloid beta peptide has nootropic and antibody artificated by amyloid beta peptide has nootropic and antibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzheimer's disease or discament for creating a subject having Alzheimer's disease, or a disease or disorder characterised by amyloid beta deposition (e.g. mild cognitive impairment, of alsease associated with Down's syndrome, or inclusion of amyloid beta peptide or its fragment. Amyloid beta peptide are derivity of amyloid beta amyloid beta peptide or its fragment. Amyloid beta peptide or its fragment. Amyloid beta peptide are derivity of amyloid beta peptide or its fragment. Amyloid beta peptide are derivity of amyloid beta peptide which is syndromer. Amyloid beta peptide are derivity of amyloid beta peptide with Down's syndromer invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antibody that is targeted to amyloid beta peptide, or its fragment, useful for treating a subject having Alzheimer's disease, or a disease or disorder characterized by amyloid beta deposition, e.g. cognitive
                                                                                                                                                                                                                                         antibody, amyloid beta peptide; amyloid beta; nootropic; neuroprotective; antibody therapy; Alzheimer's disease; mild cognitive impairment; cerebral amyloid angiopathy; congiophylic angiopathy; bown's syndrome; inclusion body myositis; neurotoxicity; beta amyloid precursor protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Similarity 100.0%; Score 24; DB 7; Length 4; Similarity 100.0%; Pred. ```
The present invention describes an immunising composition (A) comprising:

(a) an antigenic product (I) which induces an immune response against the beta-secretaes cleavage site of amyloid precursor protein (APP); and (b) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (I) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (I) a carrier displays at the farm of APP; (I) a composition of an antibody (Ab) and its surface; and (3) a composition containing FB. (A) has contropic and neuroprotective activities, and can be used in vaccines or passive immunisation. (A) inhibits the cleavage site of APP and so prevents the formation of beta-amyloid. (A) can be used to induce an immune the formation of beta-secretase cleavage of APP and so prevents the beta-secretase cleavage of APP and so prevents of for treatment and prevention of Alzheimer's disease. The molecule (II) that contains the antigen-binding part of an Ab directed against the creatment and prevention of Alzheimer's disease. The molecule (II) cleavage site, or a filamentous phage that displays such an Ab (as a single-chain molecule) can be used similarly, for passive immunisation. The present sequence represents a beta-amyloid (Abeta) peptide which is the present sequence represents an beta-amyloid (Abeta) peptide which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to a method of treating a neurological disease or displaying a therapeutic molecule capable of treating the method involves displaying a therapeutic molecule capable of treating the neurological disease or disorder of the CNS on a viral display vehicle and introducing viral display vehicle displaying the therapeutic molecule amount of the viral display vehicle displaying the therapeutic molecule to an olfactory system of the subject. The method is useful for treating a neurological disease or disorder of CNS such as a plaque-forming disease or disorder of CNS such as a plaque-forming disease. Such as Alzheimer's disease, hardoner, senility, multiple myeloma, scrapie, bovine spongiform compandipathy (BSE), kuru, Creutzfeldt-Jākob disease (JUD), Gerstmann-Streussler-Sheinker disease (GSS) or fatal familial insomnia (FPI). The method is also useful for treating a non plaque forming disease or method is also useful for treating a non plaque forming disease or disorace e.g. Huntington's chorea, viral infections of the brain, brain cumours, lysosomal storage diseases which cause neurodegeneration and are manifested by enzyme deficiencies and multiple sclerosis. The invention is also used in the preparation of vaccines. The present sequence is sequence is sequence is used to illustrate the method of the invention.
                                                                                                                                  plaque-forming disease, Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility; multiple myeloma; scrapie; hovine spongiform encephalopathy; BSE; kuru; Creutzfeldt-dakob disease; CJD; Gerstmann-Streussler-Sheinker disease; GSS; fatal familial insomnia; FFI; non-plaque-forming disease; Huntington's chorea; viral infection; brain tumour; lysosomal storage disease; neurodegeneration;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Treating neurological disease CNS e.g., Alzheimer's disease, by displaying therapeutic molecule capable of treating the disease on viral display vehicle which is then administered to subject through olfactory
                                                                                                                                                                                                                                                          multiple sclerosis; vaccine; beta amyloid peptide; epitope; beta AP;

```
The present invention relates to preparations (1) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                   New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

The method involves contacting a chemical compound with affinity support. The moving impurities in the reaction mixture surrounding cleaving or eluting the molecule from the affinity support to which the chemical molecule is bound, and irreversible or reversible affinity tagging residue, labelled target protein or labelled peptide. The method of the invention is useful for labelling a target protein/peptide or high throughput screening assay. The method of the invention is useful for identifying agents that modulate the activity or characteristics of a target protein/peptide or such agents are useful as pharmaccuticals. The present amino acid sequence represents an affinity tag peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                            Providing labeled target protein or target peptide by contacting chemical compound with affinity support, removing impurities in reaction mixture surrounding affinity support, cleaving or eluting chemical molecule from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nootropic, antiparkinsonian; gene therapy; amyloidogenesis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                            The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first reagion comprises the amino acid sequence Ala-Glu-Phe-Asp.
Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly-ADA89887 or its fragment. Also described: (I) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising the vector of (2); (4) preparing (I), comprising (I) and recovering (I) from the culture; (5) a composition comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody antibody antibody molecule (1), and formulating the composition, comprising pap optimised clones; (10) expressing confinised antibody/antibody molecule with a carrier; and (12) a pharmaceutical composition prepared by method (8). (I) has composition prepared by method (8). (I) has composition for the prevention and/or treatment of a disease associated with more control or amyloid plague formation. The antibody molecule or anyloid plague formation. The antibody molecule or anyloid plague formation. The antibody molecule or anyloid plague formation of the prevention and/or treatment of a disease associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   may also be used in preparing a diagnostic composition for the detection of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the distinceration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaques formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidopsis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                          New antibody molecule capable of specifically recognizing two regions of
the beta-A4 peptide, useful for diagnosing, preventing or treating
diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                  ö
                                                                                                    The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine for the prevention, or as a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the prevention, or as a therapeutic for the aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

The present sequence represents a peptide derived from beta-amyloid precursor protein (beta-APP, see AAW70863). The peptide is a beta-amyloid precursor protein (beta-APP, see AAW70863). The peptide is a beta-amyloid peptide and is used to produce a monoclonal antibody. The specification describes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition comprising a recombinant antibody end-specific for the N-terminus or the C-terminus of an amyloid-beta peptide, operably linked to a promoter which is expressed in the central nervous system. The recombinant antibody molecules prevent the accumulation of beta-amyloid peptides into extracellular space, interstitial fluid and cerebrospinal fluid and the aggregation of such peptides into amyloid deposits in the brain. They also inhibit the progression of Alzheimer's disease by inhibiting the interaction of beta-amyloid peptides mediating Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced complement activation and cytokine release involved in the inflammatory process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Beta-amyloid precursor protein; beta-APP; beta-amyloid peptide; antibody; amyloid deposit; Alzheimer's disease.
amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for amulacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Preventing or inhibiting progression of Alzheimer's Disease - comprises use of recombinant DNA encoding an antibody specific for the N- or C-terminus of an amyloid-beta peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This peptide is based on the N-terminal fragment of beta-amyloid peptide (beta-AP) and was fused to the minor coat protein of fd phage. This peptide may be used in the method of the invention. The invention provides an agent for treating a plaque forming disease. The polypeptide is displayed on a display vehicle and is capable of eliciting antibodies capable of disaggregating the aggregating protein and/or of preventing plaques in the brain of the aggregating protein. This reduces formation of amyloid plaques in the brain of victims of plaque forming diseases, e.g. early onset Alzheimer's disease, late onset Alzheimer's disease, presymptomatic Alzheimer's disease, haveloma, serapic, bovine spongiform encephalopathy (BSE), kuru, Crentzfeldt-Jakob Disease (CJD), Gerstmann-Streussler-Sheinker Disease (GSS) and fatal familial insomnia (FFI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating amyloidgenic disease such as Alzheimer's disease, BSE or CJD comprises presentation of plaque derived antigens or epitopes on a display vehicle, and introducing the vehicle into the recipient.
                                                                   Gaps
